

Save Environment

In this modern era, environment issues are increasing day by day which is leading to destruction of earth. We should take responsibility and take necessary steps to save the earth.

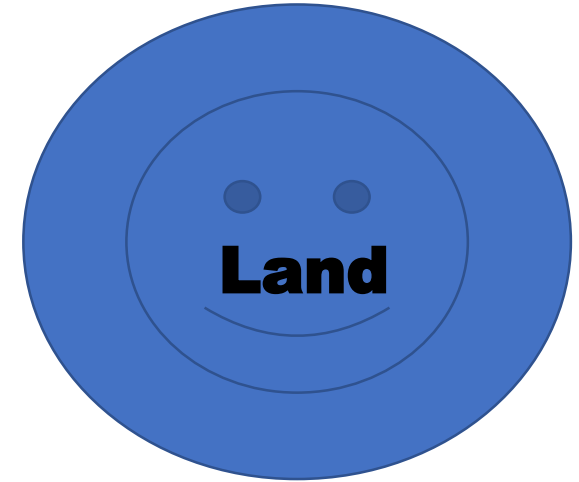

71% water + 29% land

According to current survey land and water pollution are major issues. We are left with less than 3% of drinkable water and we are growing food in polluted land and eating that is leading us to deceases.

Animations that I can use

Staging, Straight ahead action and pose to pose, Timing, Arc, Slow in and slow out are the animations which I will choose for text representation and for images as well.

How your animation adds value to your topic?

Animation has ability to convert a boring topic into interesting one. The **animation** is **used** to give a feeling of reality and aliveness, So people take much interest in it.

Explanation of animation and visual effects coding

Representation of movements(for present a message) with the help of images is known as animation. Its kind of a short film.

Visual effects coding is used to add movements in images to make it like film. The html5 canvas and css and javascript files are used to create a template for animation.

The End

Regards,
Raveena Sharma.
