

Save Environment

Environmental pollution is one of the key problems faced in this modern era. By doing simple things such as planting a tree, we shall be making the world a better place to live in.

Individuals, governments and organizations need to come together and join hands to protect what is left of our planet to save the environment so that helps to save our future.

The background of the slide features abstract, overlapping green geometric shapes, primarily triangles and polygons, in various shades of green, creating a modern and eco-friendly aesthetic.

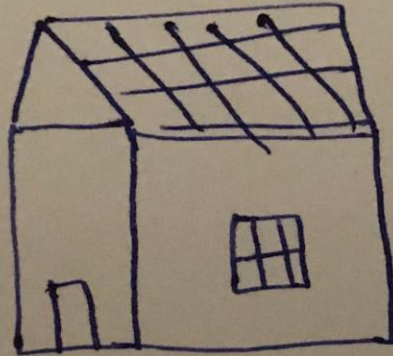

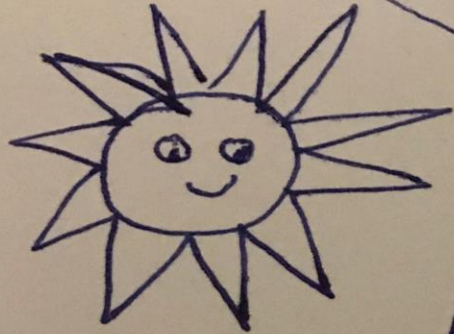

I am focusing on an individual steps to save the earth.

In step1 of my story a person think about to plant a tree in his garden. He loves to do activities which helps to save the earth and he is also a member of an organization that works to resolve the issues to save the earth.

You can see his activities in the following image .

1.

Moving Birds

Plant tree

Moving

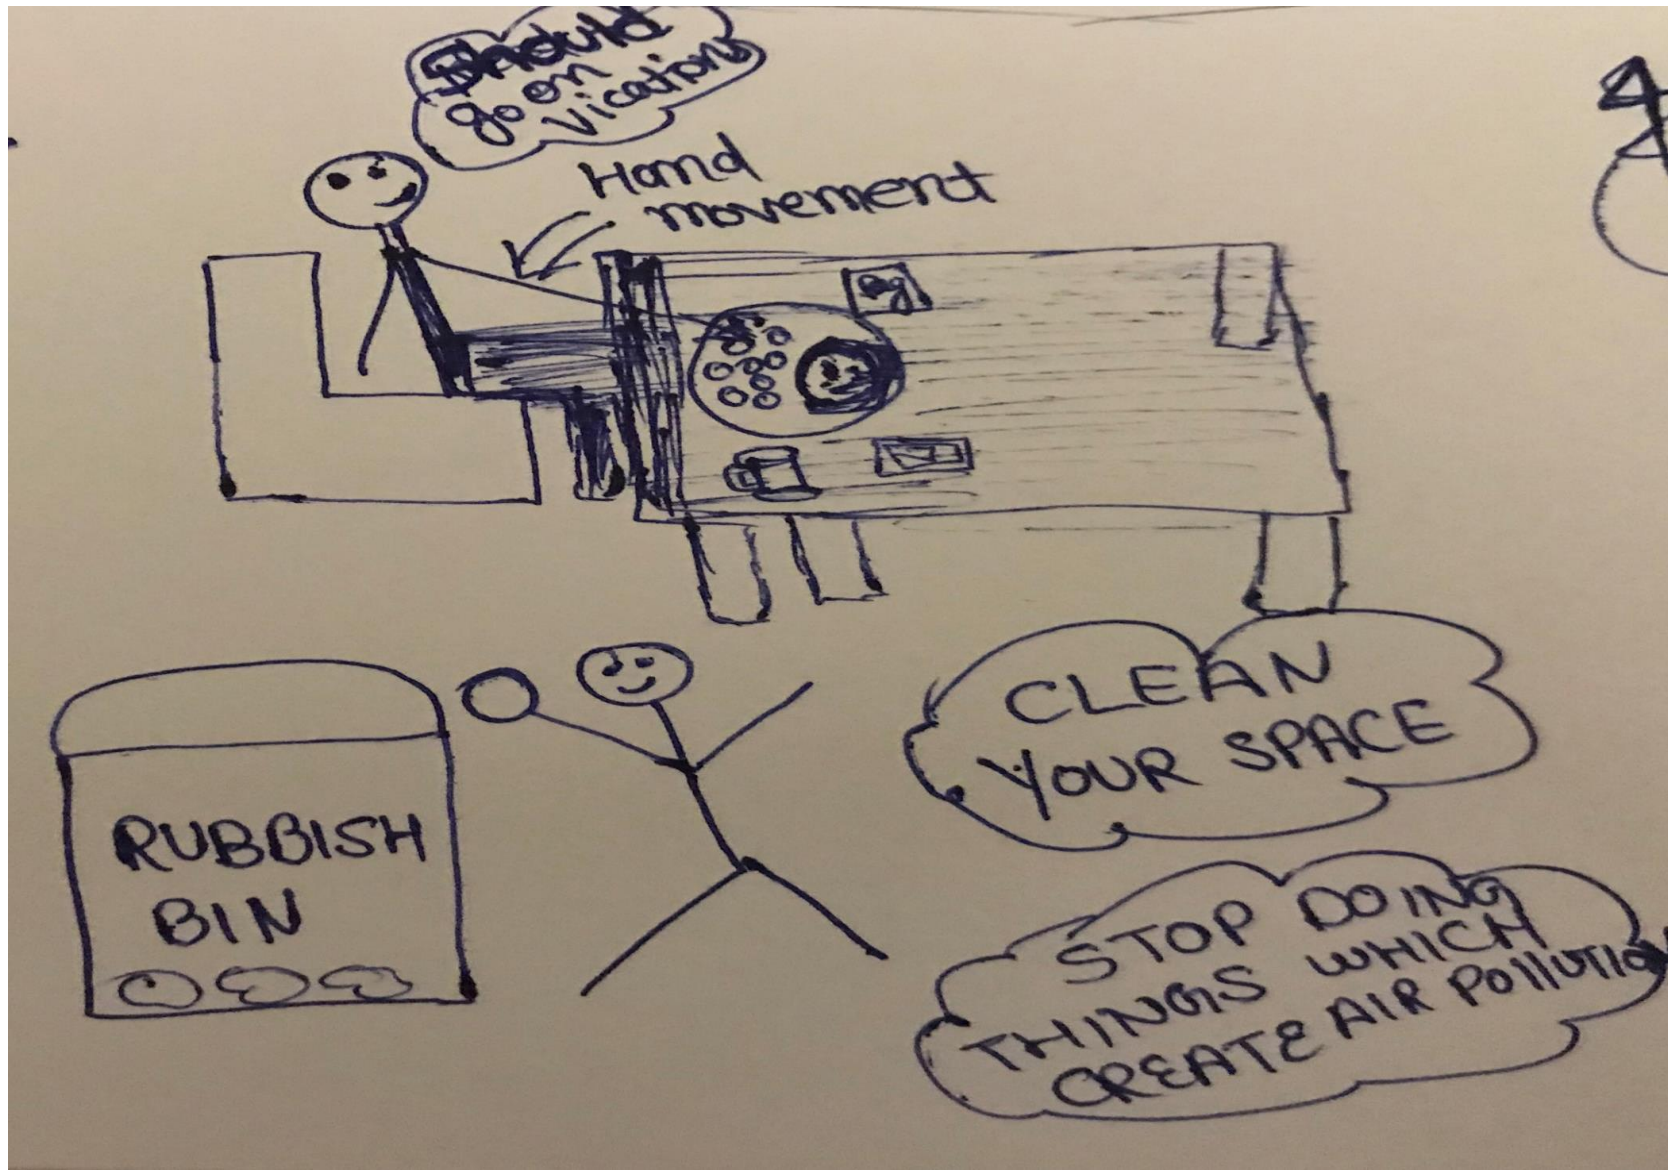

In Step2, I am going to show the thoughts of his mind.
You can see in the following image .

Use Rubbish Bin

In Step3, he is eating food and after it he put all the rubbish into rubbish bin. It helps to save environment from air pollution.

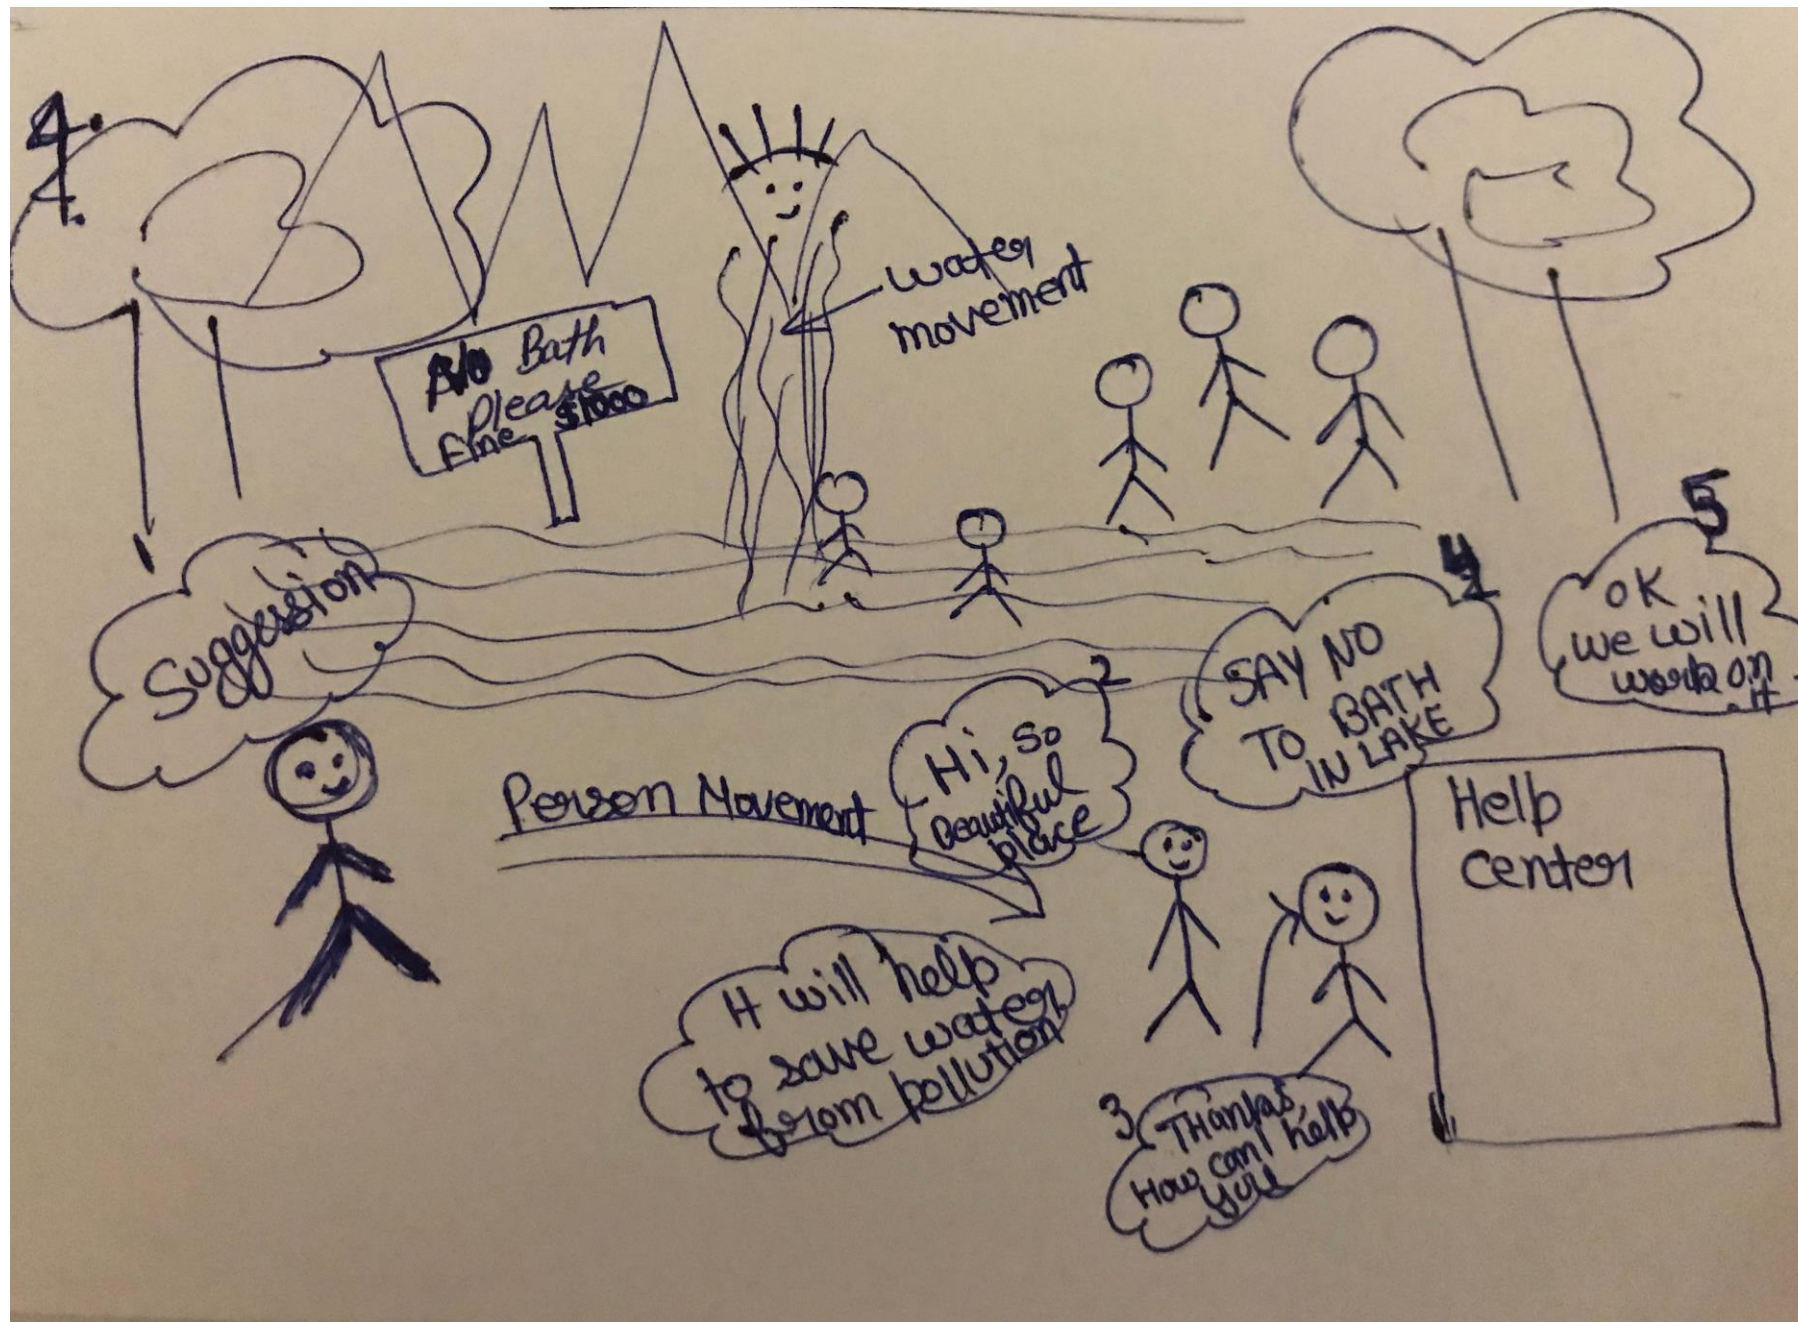

You can see in the following image .

Step to save water from pollution

In next step, he is on a trip and visiting a lake and there he see beautiful views. He is feeling so happy and after that, he see some people are taking bath in lake. So he decided to talk with management to stop that because it is a reason behind water pollution. He talk with manager and manager do agree with him and placed a board with a message “No bath please, Stop water pollution. Fine \$1000”.

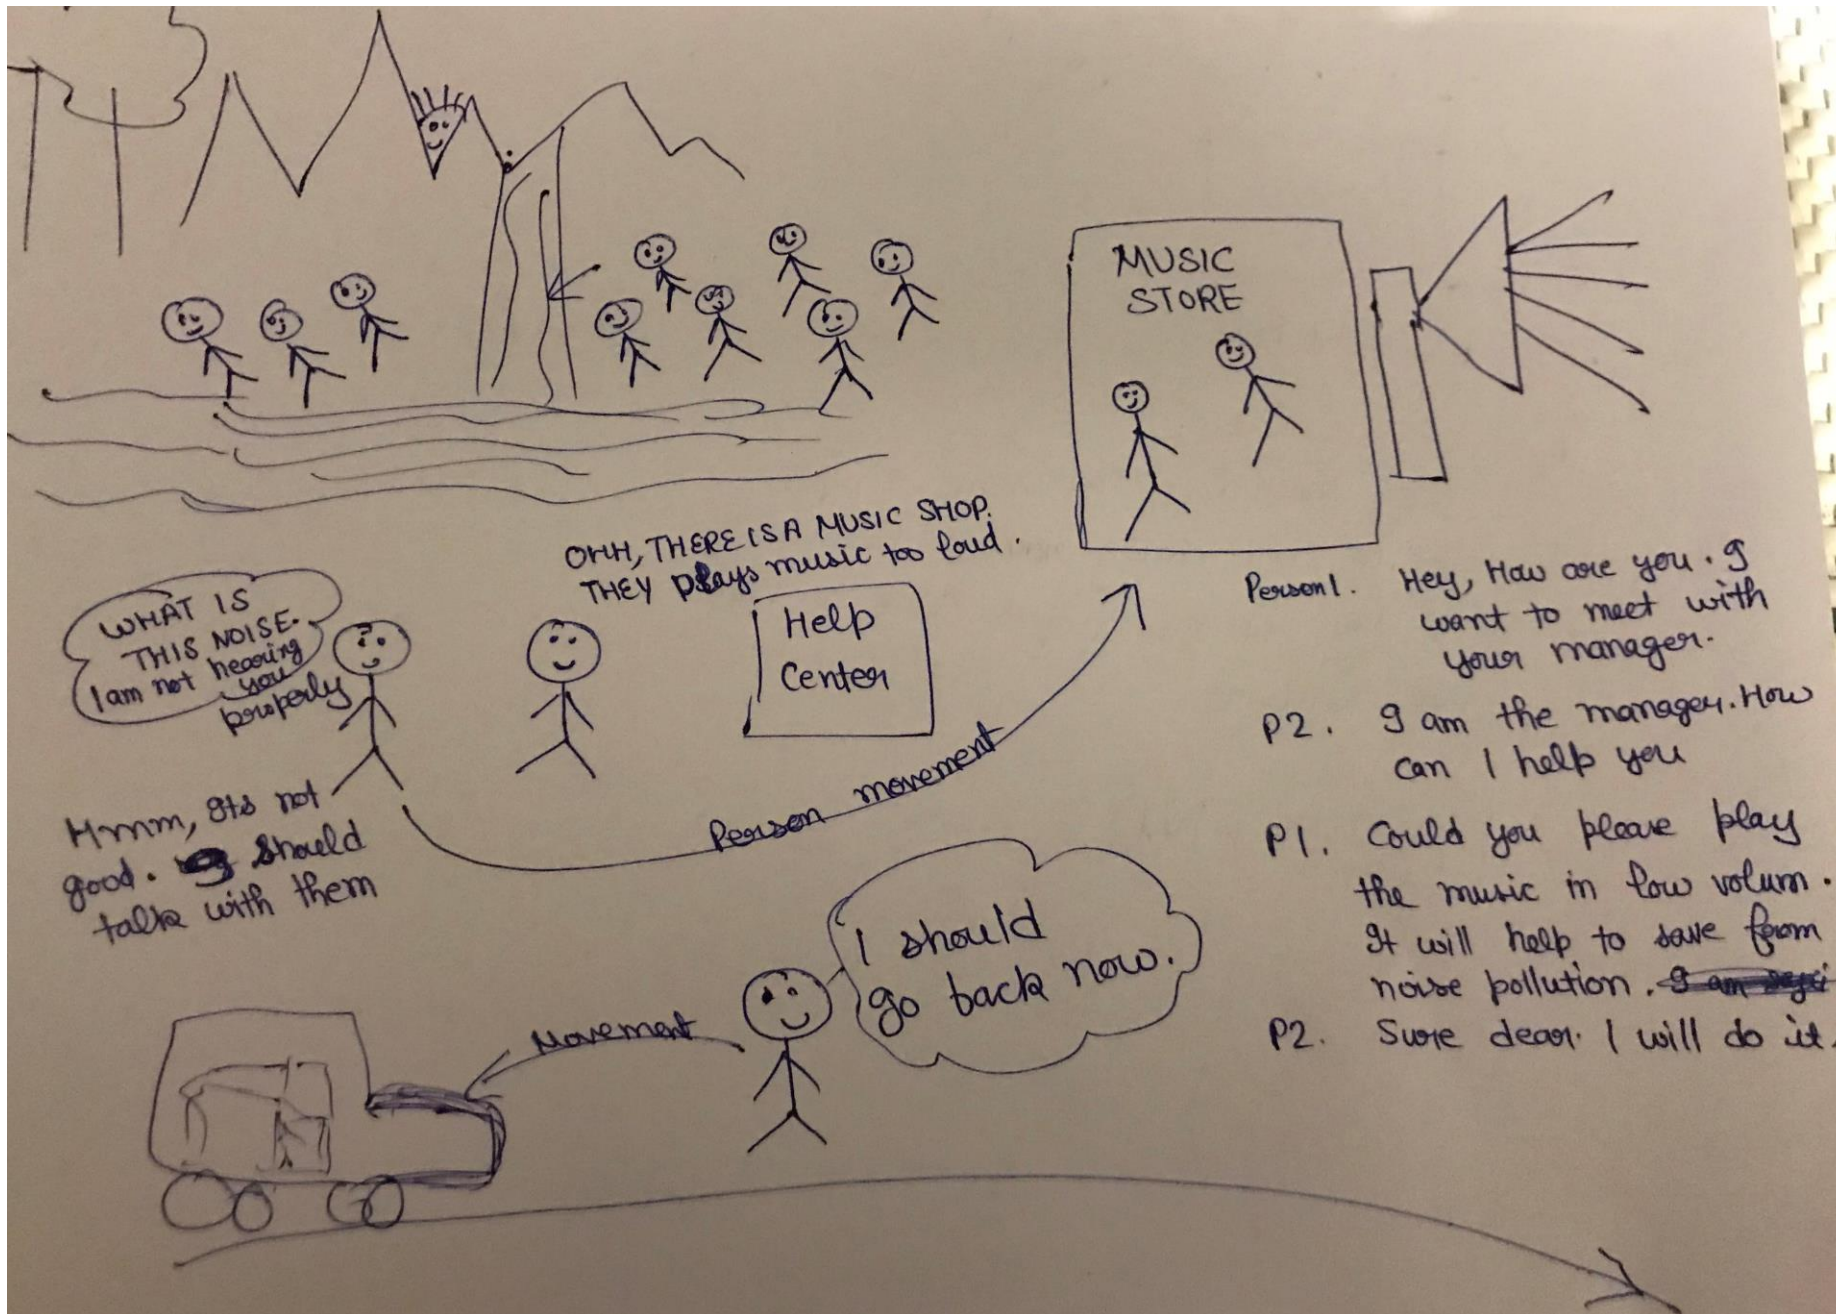

You can see in the following image .

Step to save environment from sound pollution

In next step when he is with manager of lake, he hear the loud sound. He discuss about it with manager than he knows that there is a music shop near the lake and they usually play music too loud. So as he decide to talk with the manager of music store about it and give him a suggestion to fix the volume level. So it do not disturb other people and environment. Music store manager understand his views and do agree with him.

You can see in the following image .

At the end, he come at his home with happy ending.

1. We should follow some simple steps in our daily routine to save the environment.
2. Hmm, I am feeling tired so should sleep now bye bye friends.

Types of animation I choose

1. Anticipation: for add motion to make things real
2. Staging: To draw attention. In my case I can use it in sound part, to present the sound comes from speaker.
3. Straight ahead action and pose to pose: For add realistic movements and if you are looking for fluid than go for it. In lake area, I can use it.
4. Timing: to make some action using set time. I need it in each part of my step to make things real.
5. Arc: to show a through. I can use it in rubbish bin part.
6. Slow in and slow out. In task when person come back from lake in car that I will take it to show car movement.

How your animation adds value to your topic?

Animation has ability to convert a boring topic into interesting one.
The **animation** is **used** to give a feeling of reality and aliveness, So people take much interest in it.

Explanation of animation and visual effects coding

Representation of movements(for present a message) with the help of images is known as animation. Its kind of a short film. Visual effects coding is used to add movements in images to make it like film. The html5 canvas and css and createjs javascript files are used to create a template for animation.

Problems and how I addressed these

Save environment is not a small topic, so it was bit difficult to choose what content I should choose, which gives a good message to people in a small animation. I get allot of ideas from web about how people do mess with environment and how some people take steps to prevent the earth. So I created my own story with my assumption.

Moreover, I face another problem and that problem was why and where I need to add animation in my story. For that I searched again. I go through the link given by Mark to us(<https://www.creativebloq.com/advice/understand-the-12-principles-of-animation>). After that, it was easy for me to choose the principle that I can add in my story, according to the situation to create animation.

Future improvement

I can add some movements in my work when I will start to implement my story. I need to improve my conversation points in the story as well.

THE END

Regards,
Raveena sharma.
